

Bio Circle™ Parts Cleaning

Good through December 31, 2008

A revolution in parts cleaning

Whether you are in a garage, a mill, a large fabrication shop or a maintenance department, clean parts are an important component to make your business run more efficiently. Bioremediation has only recently been applied successfully with aqueous cleaners as an alternative to industrial parts cleaning with solvents. Parts are cleaned just as effectively as with solvent-based cleaners, yet at the same time bioremediation is environmentally responsible, economical and safe to use for the operator.

CLEANING CONSISTENCY

Bio-Circle stands out !

KEY FACTORS	SOLVENTS	BIO-CIRCLE
Health	Hazardous	Non-hazardous
